1 For more than fifty years, no one had traveled to the Moon. That changed in April 2026. On April 1, NASA's Artemis II mission lifted off from the Kennedy Space Center in Florida with four astronauts on board: Reid Wiseman, Victor Glover, and Christina Koch of NASA, and Jeremy Hansen of the Canadian Space Agency.

2 Artemis II was a test flight, so the crew did not land on the Moon. Instead, their spacecraft, Orion, flew around the Moon and came back. It was the first time that people had flown on Orion, which the crew had named Integrity before the mission. During the trip, they tested the life support system, practiced with emergency equipment, and even took **manual** control of Orion to find out how well it could be flown.

3 On April 6, the crew flew past the far side of the Moon. At their closest point, they were about 4,067 miles above its surface. That same day, they reached 252,756 miles from Earth, farther than any humans had ever traveled. **The old record** had been set by the crew of Apollo 13 in 1970. During the flyby, the astronauts took more than 7,000 photos, and they even watched a solar eclipse as the Moon blocked the Sun.

4 The mission made history in other ways, too. Koch became the first woman to travel around the Moon, Glover became the first person of color, and Hansen became the first Canadian. On April 10, nearly ten days after launch, Orion splashed down safely in the Pacific Ocean off the coast of San Diego, California.

5 Artemis II was only a first step. NASA plans to use what the crew learned to prepare for future missions, and astronauts are scheduled to land near the Moon's south pole in 2028. Someday, the people who walk on the Moon might be students who are reading about this mission today.

26. Which is the best title for the passage?

1) Artemis II: A Record-Breaking Trip Around the Moon
2) Apollo 13 and Its Famous Record
3) The First Moon Landing in Fifty Years
4) How Astronauts Train for the Moon's South Pole

27. The word **manual** in paragraph 2 is closest in meaning to

1) controlled by a computer
2) controlled from far away
3) done very slowly
4) controlled directly by a person

28. What can we infer from paragraph 3?

1) Apollo 13 landed on the Moon in 1970.
2) Artemis II flew closer to the Moon's surface than any earlier mission.
3) Before Artemis II, no humans had traveled farther from Earth than the Apollo 13 crew.
4) The astronauts could not see the Sun at any time during the trip.

29. In paragraph 3, **The old record** refers to

1) the closest that any crew had come to the Moon's surface
2) the largest number of photos taken during a Moon trip
3) the longest time that a crew had spent in space
4) the greatest distance from Earth that humans had reached

30. How does the writer most likely feel about the Artemis II mission?

1) impressed by it and hopeful about future Moon trips
2) worried that it was too dangerous to try again
3) disappointed that the crew did not land on the Moon
4) doubtful that people will ever walk on the Moon again
